

Awami Nastaliq - Font Features

Note:

This page will only display properly in Mozilla Firefox. Also, Graphite must be enabled. See the [instructions on how to enable Graphite in Firefox](#).

Awami Nastaliq is a TrueType font with smart font capabilities added using the [Graphite](#) font technology. The font includes a number of optional features that provide alternative rendering that might be preferable for use in some contexts. The chart below enumerates the details of these features. Whether these features are available to users will depend on the application being used.

See [Using Font Features](#). Although that page is not targeted at Arabic script support, it does provide a comprehensive list of applications that make full use of both the OpenType and Graphite font technologies.

See also [Arabic Fonts — Application Support](#). It provides a fairly comprehensive list of applications that make full use of the [Graphite](#) font technology.

This page uses web fonts (WOFF) to demonstrate font features. However, it will only display correctly in Mozilla Firefox. For a more concise example of how to use Awami Nastaliq as a web font see *AwamiNastaliq-webfont-example.html* in the font package web folder.

If this document is not displaying correctly a PDF version is also provided in the documentation/pdf folder of the release package.

End of Ayah (U+06DD), subtending marks (U+0600..U+0605)

These Arabic characters are intended to enclose or hold one or more digits.

Specific technical details of how to use them are discussed in the [Arabic fonts FAQ -- Subtending marks](#).

Customizing with TypeTuner

For applications that do not make use of Graphite features or the OpenType Character Variants, you can now download fonts customized with the variant glyphs you choose. Read this document, visit [TypeTuner Web](#), then choose the variants and download your font.

Character variants

There are some character shape differences in different languages which use the Arabic script. These can be accessed by using Graphite features.

Unless otherwise indicated, the first feature in a table is the default.

End of Ayah and Subtending marks

This is not technically a feature, but we find it useful to demonstrate the use of these characters.

Firefox allows you to use U+06DD followed by the digits and proper rendering occurs. However, surrounding the sequence with U+202D and U+202C seems to give the most reliable results in different browsers, and so this font requires those characters in order to display properly.

Feature	Sample
U+06DD ARABIC END OF AYAH (U+202D U+06DD U+06F1 U+06F2 U+06F3 U+202C)	۱۲۳ ۱۲ ۱
