Awami Nastaliq - Font Features

Note:

This page will only display properly in Mozilla Firefox. Also, Graphite must be enabled. See Using Graphite in Mozilla Firefox.

Awami Nastaliq is a TrueType font with smart font capabilities added using the Graphite font technology. The font includes a number of optional features that provide alternative rendering that might be preferable for use in some contexts. The chart below enumerates the details of these features. Whether these features are available to users will depend on the application being used. For applications that do not make use of the OpenType Character Variants, you can now download fonts customized with the variant glyphs you choose. Read this document, visit TypeTuner Web, then choose the variants and download your font.

See Using Font Features. Although that page is not targeted at Arabic script support, it does provide a comprehensive list of applications that make full use of both the OpenType and Graphite font technologies.

See also Arabic Fonts — Application Support. It provides a fairly comprehensive list of applications that make full use of the Graphite font technology.

This page uses web fonts (WOFF) to demonstrate font features. However, it will only display correctly in Mozilla Firefox. For a more concise example of how to use Awami Nastaliq as a web font see *AwamiNastaliq-webfont-example.html* in the font package web folder.

If this document is not displaying correctly a PDF version is also provided in the documentation/pdf folder of the release package.

End of Ayah and Subtending marks

This is not technically a feature, but we find it useful to demonstrate the use of these characters.

These Arabic characters are intended to enclose or hold one or more digits.

Firefox allows you to use U+06DD followed by the digits and proper rendering occurs. However, surrounding the sequence with U+202D and U+202C seems to give the most reliable results in different browsers, and so this font requires those characters in order to display properly.

Specific technical details of how to use them are discussed in the Arabic fonts FAQ -- Subtending marks.
